

# Tamper Evident Seals

**TAMPERTAPE**

H11-1782116

Tampering can happen to any product, from medicine to candy to cosmetics. When goods are deliberately contaminated after they are manufactured, they have been tampered with. Both tampering and threatening to tamper are criminal offenses.

Other incidental contamination may also occur to an item you intend to buy; liquids may spill on products during shipping, packaging may be crushed in transit, or weather or temperature may affect the integrity of the item.

# What manufacturers have been doing to prevent tampering?

Pharmaceutical manufacturers have tried many things to counter the growing threat of product tampering. **Tamper-evident packaging** is the latest addition and being widely used now to address these concerns and protect consumers.

Types of packaging vary, but all show some visual signs when a package has been opened.

# Tamper Evident Seal

A Tamper evident seal or band is a PVC plastic sleeve that fits around the cap and neck (*or sometimes the whole bottle or jar as part of a full label*) which must be torn and removed to open the container.

Such seals that cover the connection point between the cap and the bottle. These must be ripped off and removed to open the cap. If the seal isn't very tight or there's damage to the plastic, you can be alerted to a problem with the product within. The seal may cover the closure or the full length of the container, and provides visible evidence of product integrity.

Once the tamper evident seal has been removed it is not possible to re-apply the used band and therefore it is obvious that the container seal has been tampered with. It lets you know if your product has been opened prior to purchase. It helps the consumer be rested assured that the product is safe to use and has not been damaged by anyone.

# Benefits of Tamper Evident Seal

Tamper evident seal application is a **fast and easy way** to offer your customers a tamper evident container or bottle. Whether you're packaging anything from food to pharmaceuticals, tamper evident seals is a very good option to add **value and protection** to your products.

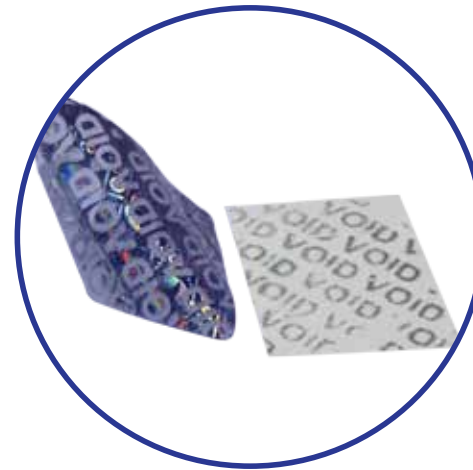

But the biggest benefit is that Tamper Evident Seals **can't be reapply** which ensures that a specific product has not been used by anyone else till it has reached in the hands of a consumer.

# Lasersec Technologies's Touch

Our security seals feature superior tamper evident performance, which is designed to function within one minute of application on the recommended surfaces. Unlike competitive products, there is no long waiting period for the tamper evidence feature to be functional. Once the seal has been removed, it cannot be reapplied to the container, giving customers piece of mind with regards to the safety and integrity of your product.

High residue stickers (S28) offer the best security. The tamper evident feature is more sensitive. Also, they are more versatile because they are effective on a wide range of surfaces and materials. However, if the container or surface is reusable, consult the ease of cleaning up the adhesive residue.

Our recommended surfaces list is a guideline based on our lab tests and customer feedback. To confirm the product, we always recommend testing samples prior to ordering product.

# Product Solutions

## Transparent

Unlike the trend where tamper evident seals come in white, we also offer transparent seals.

## Customized

We can manufacture tamper evident seals even in the low quantity, depending upon the client requirement.

Our offering is cost effective and doesn't take much from your pocket.

Product tampering is a growing problem worldwide and these tamper evident seals go a long way to ensuring the integrity of your product. They are easy to apply, easy to remove, but virtually impossible to replace in a non-damaged state. Tamper evident seals are an easy and economical way to offer customers a tamper evident container seal while adding value to your product. Tamper evident seals can be used in a variety of industries including cosmetic & personal care products, food & beverage & pharmaceuticals.

**This is exactly why companies apply it and insist on consumers first checking the tamper seal and then purchasing the product.**

# About Lasersec Technologies

Lasersec Technologies is the leading manufacturer of holograms being used as an anti-counterfeiting device. We ensure a high-level secrecy and quality at each and every step right from production to delivery of products. We enjoy a wide network of branch offices in all the metro & major cities in India. We are also having business alliances outside the country in Bangladesh, Srilanka, Malaysia, Nepal, Europe & UK.
